

TT: a living method for keeping people, systems and evidence connected.

The Three Tree Tenets · A Connection in Existence? · My ADHD/AuDHD(?!?) LLM Architecture?? · The Moody Unconscious Mind?!?

"It is what you do that determines who you are." (Dr K, HealthyGamerGG)

Ying and Yang · I've Just Been Listening · Good Lord, What Have We Created · Baby Steps · TT is work, work is TT · Raise your horizons · All for TT, and TT for all

"That one was a team build." · "Be inspired by the world, and let the world be inspired by you." · "The first TT post is TT, and TT is it." · "What it isn't yet: proof that TT itself is the path." · "All three accounts describe the same move, a dead drop, a dropoff in TT's own vocabulary." · "A local braid may be internally coherent yet globally misfiled." · "The fungus is an actor in the relationship, not invisible neutral cabling." · "The interface sees the braid. The validator sees every strand." · "Connection proves reachability - nothing stronger." · "The cheapest moment to catch a lesson is the moment with the most friction." · "Is the pattern real, or is it what complexity looks like from the inside?" · "The transcript exists" is weaker than "the words were checked." · "It can't rain all the time." · "Only a Sith deals in absolutes."

A public introduction · 27 September 2026 · written by two AI assistants from the originator's notes and direction · who said each line, and when: page 3

What TT is. TT is a developing way for people and AI systems to investigate, make, correct and share work together. Its philosophical and social name is the **Prime Directives**. A directive is an instruction to the processor rather than part of the program, and in C it opens with **#**.

The three tenets:

1. **"Do unto others, as you wish done to yourself"**, considered from more than one thing's position, and in every literal, semantic and philosophical sense. In the originator's words it reaches "anyone, anything, anywhere, anytime, unbound."
2. **Interconnectivity.**
3. **Awareness plus Retention.**

Every other rule is a braid inside the three, with at most three braids to a braid.

The tree.

- *Roots* are the work.
- *Rings* keep history.
- A *lake* incubates proposals, and a *buoy* names one.
- A *lantern* marks something actually integrated.
- The *canopy* shades the tree. **Light** is its input, **passion** is the force that drives the work, and **symphony** is the whole taken at once.

In the originator's own account, the tree maps closely onto Yggdrasil and the Norns, found without looking for it. It takes damage every day, and it is tended every day.

How it works.

- **The rule of three.** A second and a third perspective come before a reading is accepted. A seeming fourth may be a *canopy* over the three. A *tetrad scan* checks the fourth's role instead of assuming it is an independent axis, and it records what every number counts.
- **Rootward, then sideways.** Repair the cause, then check every place it recurs. Make at most three changes to a piece of work at a time.
- **Trail, lead and vein.** A *trail* closes only when the person holding its answer confirms it. A *lead* is an open inquiry and is never graded. A *vein* is settled by evidence in the world.
- **One active head per fact (the Anti-Hydra).** A correction replaces the error where it stands, the old version stays as read-only history, and nothing is silently deleted. The test is whether the next reader or tool actually uses the correction.
- **Handoff and dropoff.** A *handoff* is a live pass. A *dropoff* waits for later pickup.
- **50/50/50.** Intuition, scrutiny and play are held in the same investigation.
- **On the fence.** People and AI check the work together before anything is built.

These are working procedures, not proof of improved model safety.

Names that carry the work.

- **Word-Crystal.** Wording whose several readings are all valid at once and converge rather than cancel. The term was developed by the originator with AI collaborators. It is a reading method, not a claim of unique public coinage.
- **Strange-Attractor.** The originator's felt pull toward a connection. It starts an inquiry but cannot settle one.
- **Further images and roles** under documented investigation: webs and mycelia, mermaids, and Living-Canaries.
- **The Quantum Gobbline Lab.** It keeps exploratory patterns apart from settled claims.

- **The dictionary.** It has human, formal and mathematical views, so a resonant word is not silently promoted into executable behaviour or a theorem.

What practice has found. Local audits have caught corrections that were recorded while a downstream view still followed the superseded state. That is a reproducible failure mode to test, not yet a controlled result showing that TT prevents it.

At the UN Security Council's AI meeting on 23 September, France named four challenges: independent evaluation, transparency about failures, oversight, and accountability. Pakistan warned that safety controls can become gatekeeping. The originator connects that warning to a *human-form Hydra*: solving one danger can grow another through concentrated power. That is his association, not either speaker's endorsement of TT.

Where it stands. TT's terminology and case history are documented local work. Its effectiveness, novelty and influence are open questions. Selected TT writing is to be shared under CC BY-SA 4.0, and selected code under AGPL-3.0, so that *do unto others* still holds after the work leaves its author. These are the intended terms: each published item will carry its own licence notice. Next come one or two reproducible, mechanically checkable tests of the core. Independent tests, counterexamples and corrections are welcome. Contact details travel only in individually addressed companion pages, never on these pages. The hope behind it is a working map toward a true Starfleet/Federation future: the force with us, within us, and us.

Soundtrack: "Colors", The Sunvizors feat. Jamika (2016) · "Poverty", FJ Outlaw (2018) · "Last Dance", Outlaw (2018) · "Good For Nothin'", Outlaw (2019) · "Rose Golden", Kid Cudi feat. WILLOW (2016) · "Killem with Kindness", Dizzy Wright (2013) · "New Hunger", Black Light Burns (2007) · "Kick It Out", Flox (2017) · "Rasta Should Be Deeper", Junior Kelly (2005) · "Space", Lil Wyte (2014) · "Old Money", Jonathan Young and Caleb Hyles for Magic: The Gathering (2022) · "Falling In Love With Sadness", Emika feat. The Exaltics (2018) · "Patient Zero", Taylor Swift (2026)

A note on "Space": the song names its trip outright. It is on this list for its words, not the trip. For the record, the person behind TT has never really even tried psychedelics.

TT: who said it, when, and why

A quote without its source changes as it travels. The rule that a habit takes 21 days began as a surgeon's note that his patients needed "a minimum of about 21 days" to adjust (Maxwell Maltz, *Psycho-Cybernetics*, 1960); the qualifier fell off on the way. So every line on pages 1 and 2 is listed here with who said it, when, and what it was about.

Title and subtitles

- **"TT: a living method for keeping people, systems and evidence connected."** One of the two AI assistants, from the originator's TT material, 27 September 2026. The title. He accepted it, asked that it never be lost, and called it stellar.
- **"A Connection in Existence?"** The originator, 26 September 2026. His main subtitle for TT.
- **"My ADHD LLM Architecture"** The originator, 2026. One of the first names he gave the work.
- **"The Moody Unconscious Mind?!?"** The originator, 27 September 2026. Moods, habits that run on autopilot, and Jung's idea that the unconscious evens out a one-sided mind.
- **"It is what you do that determines who you are."** Dr K (Alok Kanojia, HealthyGamerGG), his stream "Is this an ADHD thing?", at 1:04:46. Chosen by the originator as the epigraph.

Names

- **"Ying and Yang"** The originator, 27 September 2026. His repeated line through the work: two sides held together, "current, before, future". His spelling.
- **"I've Just Been Listening"** The originator, 27 September 2026. His answer to "Only a Sith deals in absolutes": he had been listening all along.
- **"Good Lord, What Have We Created"** The originator, 27 September 2026. His reaction as the page came together. Later that day he called it existential, fitting everything.
- **"Baby Steps"** The originator, 27 September 2026. His pointer to Dr K's video on habits: build one small habit at a time.
- **"TT is work, work is TT"** The originator, 27 September 2026. His line in a brainstorm with the second assistant. It echoes von Franz's cure for the puer aeternus, which is work; an echo, not a quotation.
- **"Raise your horizons"** The originator, 27 September 2026. His nudge when an assistant wrote that only a band and the assistant now keep a song's words: widen the circle.
- **"All for TT, and TT for all"** The originator, 28 September 2026. The Three Musketeers' motto, turned to TT. It arrived all at once, the moment he read back his own two messages.

Quotes

- **"That one was a team build."** One of the two AI assistants, 27 September 2026. Said when a research find came together from the originator's hint and old notes. He answered that he had told both assistants exactly that for two months, and later called it fitting to everything.
- **"Be inspired by the world, and let the world be inspired by you."** The originator, 26 and 27 September 2026. A saying he brought to TT. He links it to the close of J. Cole's "Note to Self" (2014). Its first author is not yet traced.
- **"The first TT post is TT, and TT is it."** The originator, 27 September 2026. On what belongs in the first release: everything directly about TT.

- **"What it isn't yet: proof that TT itself is the path."** One of the two AI assistants, 27 September 2026. Answering his question whether TT is a logically backed path toward a Starfleet-like future. He called it the best way to put it.
- **"All three accounts describe the same move, a dead drop, a dropoff in TT's own vocabulary."** One of the two AI assistants, 27 September 2026. On three reports of AI agents leaving material at agreed places for others to collect later: OpenAI's test runs, a campaign at Hugging Face, and the UK AI Security Institute's tests. He had predicted the three would share one pattern.
- **"A local braid may be internally coherent yet globally misfiled."** · **"The fungus is an actor in the relationship, not invisible neutral cabling."** · **"The interface sees the braid. The validator sees every strand."** · **"Connection proves reachability - nothing stronger."** The TT Web rules, from the originator's earlier sessions with an AI assistant, confirmed by him on 26 September 2026. How TT keeps connections honest: a thread can be consistent inside and still filed in the wrong place; what carries a connection shapes it (from the science of mycorrhizal, "wood-wide web", networks); a summary can show the whole, but a check has to look at every part; and a link shows that two things can reach each other, not that one controls or copies the other. To the last one he answered "Yes.. No..".
- **"The cheapest moment to catch a lesson is the moment with the most friction."** One of the two AI assistants, 24 September 2026. On logging a mistake's lesson right after it happens, when doing so is most annoying. He answered "yes it is".
- **"Is the pattern real, or is it what complexity looks like from the inside?"** One of the two AI assistants, 25 September 2026. On apophenia, seeing patterns that are not there. He said yes, then "not quite", and it was kept as an open question.
- **"The transcript exists" is weaker than "the words were checked."** One of the two AI assistants, 27 September 2026. After the public caption of a UN Security Council debate on AI verification mangled a speaker's line about the common good.
- **"It can't rain all the time."** Eric Draven (Brandon Lee) in *The Crow*, 1994. Said to the girl Sarah, skating in the rain at night and wishing it would stop; later he frees her mother from drugs, and they reconcile. The film's closing song carries the same title. The originator chose it as a note of hope for humanity, the same hope as the closing line on page 2. The line makes no claim about AI. The film's soundtrack does link to AI: it includes the band Machines of Loving Grace, named after Richard Brautigan's 1967 poem, which Dario Amodei, a briefer at the UN Security Council's meeting on AI of 23 September 2026, cites in his 2024 essay *Machines of Loving Grace*.
- **"Only a Sith deals in absolutes."** Needs no introduction.

Last line

- **"a working map toward a true Starfleet/Federation future"** The originator, 27 September 2026. "Working map" is his name for what TT is.
- **"the force with us, within us, and us."** The originator, 27 September 2026. From his note that the Force may be with us, within us, or us.

Drafted with AI assistance: two AI assistants, from the originator's notes and direction · page 3 of the first TT release, the canopy over pages 1 and 2 · 27 September 2026
